

Monitoring, Alerting & Auditing

There is no silver bullet for preventing a cyber security attack. However, a layered approach to security with continuous monitoring, real time alerts and auditing is the key to protecting your business.

We take a holistic approach to your business's security management to help minimize cost and reduce the overall workload for internal teams who have other priorities to keep your business up and running. Our fully staffed operations center has specialized security analysts continuously monitoring your systems to provide top-notch service for the following areas:

Under our management, recourse intensive auditing & logging reports are generated to provide a snapshot of your environment in order to meet your compliance needs, allowing you to save time and money. We save logs for as long as necessary in order to meet regulatory compliances..

In the event of an issue, Armory 5 alerts you of the issues and works eith you and your team to remediate the problem. Our weekly threat reviews and prevention monitoring is also in place to reduce issues and ensure you have a healthy and safe network.

At Armory 5, we strive to provide affordable solutions in cyber security that provide both a piece of mind and constand surveillance to keep you running.
